First strand cDNA was primed with a primer [5' GACAGAGAGAGCCCAGAGACTCTTTTTTTTTTTTTVN 3'], cDNA was primer prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. CDNA went through one round of normalization to Rot = 7.5 and subtraction to Rot = 37.5. Second strand cDNA was prepared with the primer adapter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yo

                                                 The present sequence is the human bcl-w gene encoding Bcl-w protein compared to the Bcl-2 family which is compared to the Bcl-2 family which is compared to the Bcl-2 family which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an action in model for the identification of molecules and genetic sequences useful for inducing or reducing fertility, or animals. Methods are provided for the treatment of infertility, or animals. Methods are provided for the treatment of infertility, or model carries a mutation is at least one allele of the human or model carries a mutation is at least one allele of the human or model carries a mutation is at least one allele of the animals infertile, but possess no other major abnormalities as determined to by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Spermatogenesis; bcl-3 gene; Bcl-2; human; fertility; infertility; animal model; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The mammalian bcl-y genes encode a protein that is a member of the bcl-2 family, components in the cell death pathway. The bcl-2 family have both apoptotic activity and the apoptosis blocking activity. bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders where prevention of cell death is desired.
                                                                                                                                                                                                                                         84 spGluLeuPheGlnGlyGlyProAsnTrpGlyArgLeuValAlaPhePhe 100

The present sequence encodes human bcl-y protein (Hbcl-y). The CC specification also describes rat bcl-y protein (Rbcl-y). Rbcl-y and CC specification also describes rat bcl-y protein (Rbcl-y). Rbcl-y and CC proteins may be used to treat conditions associated with a disruption of CC proteins may be used to treat conditions associated with a disruption of CC used in therapies to treat subjects suffering from: strokes, head trauma, CC used in therapies to treat subjects suffering from: strokes, head trauma, CC especially multiple sclerosis, myocardial infarction, vitally induced CC (especially multiple sclerosis), myocardial infarction, vitally induced CC cell death, aging, spinal cord injuries and amyotrophic lateral as a CC sclerosis- conditions where cells under go premature cell death as a CC cresult of triggers which may or may not be apparent. They may also be CC used in this way to develop cell lines which remain viable in culture for an extended period. In contrast, if they act as cell death stimulators, and amyotrophic lateral conditions associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              documentation_block:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis, antibody production or screening of potential modulators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence encodes a novel human gene, bcl-w, from the bcl-2 gene family, extracted from an adult brain library. This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bel-w gene a mutation is at least one allele of the human or murine bel-w gene a mutation is at least one allele of the human or murine bel-w gene a mutation is at least one allele of the human or murine bel-w gene a mutation is at least one allele of the human or murine bel-w gene a mutation may be used to screen for therapeutic molecules including they can be used to screen for therapeutic molecules including they can be used to screen for therapeutic molecules including they can be used to screen for therapeutic molecules including they can be used to screen for therapeutic molecules including they can be used to screen for therapeutic molecules including they can be used to screen for therapeutic molecules including they can be used to screen for therapeutic molecules including they can be used to screen for therapeutic molecules including they can be used to screen for therapeutic molecules including they can be used to screen for therapeutic molecules including they can be used to screen for therapeutic molecules including the fertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo sapiens.

The bcl-2 family have both apoptotic activity and the apoptosis blocking activity, bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its

This gene promotes cell survival, so its modulation is useful in stroke, alzheiner's disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell inas cultured in vivo. e.g. to develop new lines, to facilitate during genetic modification. It can be used to modify cell isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w modulators, diagnosis, antibody production or screening of potential

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis in animals, or which can induce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      bcl-w gene (see AAX25133) and encodes Bcl-w protein (see AAX05533), pro-survival member of the Bcl-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for identification of molecules and genetic sequences useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       identification or mulecuary .... identification or reducing fertility of male animals. Methods are inducing or reducing fertility, or for reducing provided for the treatment of infertility, or for reducing provided for the treatment of infertility, or for reducing a provided for the treatment of infertility, or for reducing the provided for the treatment of infertility, or for reducing the provided for the treatment of infertility, or for reducing the provided for the treatment of infertility of male animals. Methods are inducing or reducing the provided for the treatment of infertility of male animals. Methods are inducing or reducing fertility of male animals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bcl-like (HAICH29); chronic inflammatory disease; allergic reaction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleotide sequence of the cDNA clone Bcl-like (HAICH29).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                20-NOV-1998 (first entry)
                                                                                                                                                                                                                      This is the nucleotide sequence of the cDNA clone Bcl-like (HAICH29), used in the method of the invention. The products of the clone can be used for treating conditions associated with abnormal expression of the polypeptides. They can be used for e.g. treating chronic inflammatory diseases, immunological disorders, autoimmune diseases, inflammatory diseases, various allergies, and as anti-infectious agents. The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           21-JAN-1997;

                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a nucleic acid molecule designated Gene 120 from the human cDNA clone HGBCZ64 (deposited as clone ATCC 97902 and ATCC 209048) which encodes a secreted human protein. The gene can be communoglobulin Fc portion (e.g. AAV59502) for increasing the stability of immunoglobulin Fc portion (e.g. AAV59502) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 186 novel genes and their fragments (nucleic cacid sequences: AAV5951-V59812; amino acid sequences AAW74731-W75026)

Which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new Collypucleotides. Specific uses are described for each of the 186 the new polynucleotides. Specific uses are described for each of the 186 polypucleotides, based on which tissues they are most highly expressed in
                                                                                                                                                                                       Align seg 1/1 to: AAV59630

```

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid

macular degeneration, arteriosclerosis,

```
The sequence represents the coding sequence of Bcl-Xl-DTR apoptosis-CC modifying fusion protein comprising human Bcl-Xl sequence fused via a CC short linker to diphtheria toxin receptor binding domain (DTR). The CC functional apoptosis-modifying fusion protein is capable of binding a CC target cell and integrating into or crossing a cellular membrane of the CC target cell. The apoptosis-modifying fusion protein comprises at least CC two domains: the DTR domain, which targets the fusion protein to the CC target cell and the Bcl-XL domain, which modifies an apoptotic response CC inhibiting or enhancing) apoptosis in a target cell, such as neuron, CC lymphocyte, cancer, neoplasm, macrophage, epithelial, stem, tumour or CC typer-proliferative cell or an adipocyte. It is also useful for reducing apoptosis in a subject after transient ischaemic neuronal injury, CC especially spinal cord injury. The fusion protein may be used to treat CC of apoptosis in a subject after transient ischaemic neuronal injury, CC especially spinal cord injury. The fusion protein may be used to treat CC of apoptotic cellular response, including neurodegenerative disorders count as Alzheimer's disease, Huntington's disease, spinal muscular counters and counters. The apoptosis-modifying fusion protein can be delivered celfectively throughout the body and targeted to selective tissue and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          in the method of the invention. The method allows detection of interactions between a protein X and a protein Y which has a reporter function in eukaryotic cells, and comprises modifying the localization patterns of X and/or Y, and the localization of Y in the cell is observed using the reporter function. This method is useful for the elucidation of protein networks within the cell. It is also applicable for the discovery of new proteins and low-molecular drugs, by observing their effect on intracellular protein interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Detection of protein-protein interactions for screening compounds capable of modifying the interaction comprises observing intracellular localization of one protein after altering the modification pattern
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WO200168885-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polymerase chain reaction; mitochondria; ss.
